B MIDSTREAM and DOWNSTREAM

B WHERE WE ARE

The energy industry is nowadays one of the most demanding in terms of **safety, quality, reliability** and **sustainability**.

This is why there is a continuous improvement in the industry standards as well as in the products and solutions provided by the manufacturers and service providers.

In the technical field, the reduction of fugitive emissions is certainly one of the main targets, as well as the improvement in the process efficiency, to reduce the overall CO2 footprint.

This is particularly true for a valve and instrumentation manufacturer, where valves, actuators and controls play a vital role in a plant performance.

Also, the proximity to the customers has become an important requirement.

Being able to win all these challenges and ensure that products are of the highest standards, requires knowledge, commitment and investments that only the energies of a group can provide.

The **Bonomi Group**, an Italian excellence in the field of valves, fittings and actuators, has a wide range of products and solutions engineered and manufactured specifically for the **energy sector**.

After more than 120 years since its inception, in 2022 the group runs 9 manufacturing plants in Italy, 7 branches worldwide, more than 850 people and sales in excess of 330 millions €, but it remains a family-owned enterprise ever since.

Within the Bonomi Group, **Penta, Quam, Valbia, Valpres**, with their engineered products lines, **supply valves, controls, and actuators** for the upstream, midstream and downstream sector.

The target of this brochure is to display, in a visual and intuitive manner, how all these Bonomi Group brands serve the energy market: which products are manufactured by whom and where these products are used.

Then, once the products of interest have been identified, further information may be found in the dedicated documentation or can be obtained by contacting our sales teams.

To the right of the infographic are the typical upstream plants and to the left all the midstream and downstream ones, while turning the opposite pages you will find pictures and short descriptions of the products, **manufactured** by each of the companies within the group, that are relevant to the market segment displayed.

The group's portfolio is impressive and spans from severe service choke valves to ball valves for high and cryogenic temperatures, to state-of-the-art multiturn electric actuators, patented control ball valves, HIPPS valves and systems, wellhead control panels and more.

So, buckle up and welcome to the Bonomi Group world!

Stainless steel and carbon steel, cast iron ball valves, butterfly valves, floating, trunnion, cryogenic, control ball valves and energy harvesting control valves.

Production of rack and pinion double acting and spring return pneumatic actuators. Production of electric actuators. Supply and automation of ball and butterfly valves and accessories.

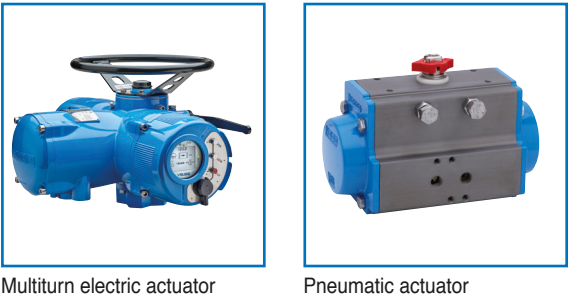

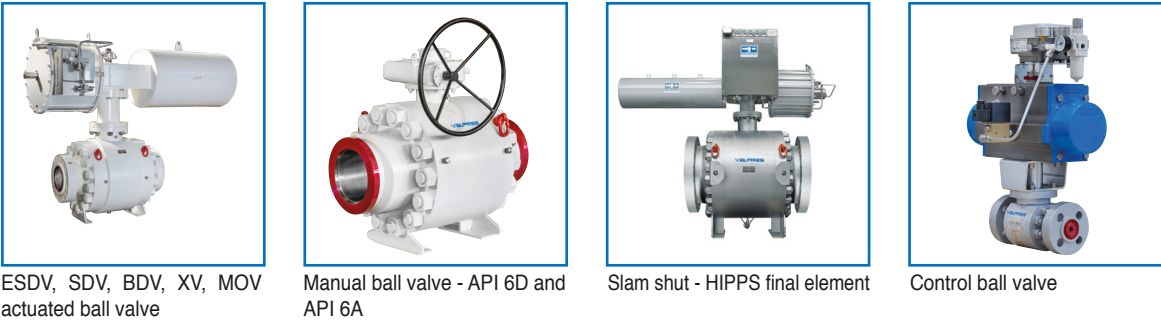

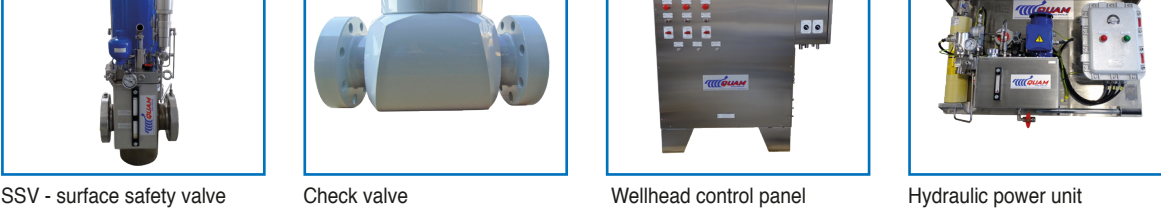

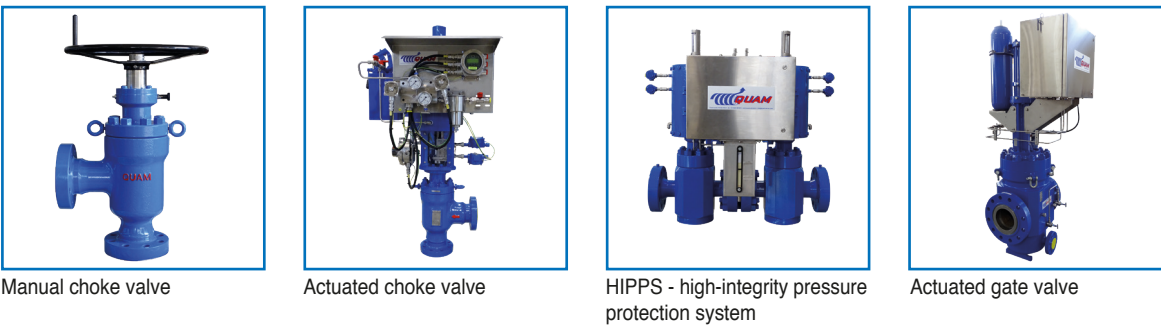

Choke valves, gate valves, control systems and special valves with a huge variety of materials and engineering solutions for Oil&Gas upstream and midstream Industry.

Metal seated ball valves for critical operating conditions such as high temperatures (up to +700°C), low temperatures (up to -200°C), abrasive services, dangerous applications and engineering for specific services.
